

1. What is the Problem?

Goals of care discussions (GOCDs) between hospitalized patients & their healthcare providers are found to be challenging and time consuming

75% of patients lack decision-making capacity at the time of ICU admission, and many have not had a previous GOCD and/or documented CODE STATUS

This can result in a loss of patient autonomy and low-value care - care the patient does not want, or does not benefit or may harm the patient, and leads to unwarranted expenditures

2. Our Solution

In order to facilitate and standardize GOCDs, Intensivists from the Royal Victoria Regional Health Centre developed a web-based tool to support patients and their substitute decision makers (SDMs) through informed and meaningful GOCDs with their healthcare providers

The tool consists of 4 modules that provide patients, SDMs, and trained healthcare providers with objective and personalized health information to ensure treatment preferences are informed and concordant with both patients' goals of care & professional judgement

3. Examined in a Randomized Control Trial

The ASKmeGOC e-tool was examined in a randomized control trial, compared to usual care GOCDs (ClinicalTrials.gov NCT06002113)

1906

Patients enrolled from Oct 5th, 2023-Oct 31st, 2024

INCLUDED

Any patient:

- age ≥ 80 years
- Hospitalized ≥ 24 hrs
- ward-based only

ICU NURSES

trained to use the tool to guide GOCDs with patients and SDMs

4. Outcomes Examined

ICU UTILIZATION

CODE STATUS PREFERENCE

QUALITY OF DISCUSSION

DECISIONAL CONFLICT AND UNDERSTANDING

E-TOOL SATISFACTION

Patient Evaluation of E-tool (Best Score = 5)

SELF-REPORTED PATIENT OUTCOMES

When asked about the amount of information provided in the tool [1-much less to 3=just right to 5-much more], the average self-reported patient response was 3.18 (sd 0.55)

REGARDING RESUSCITATION OPTIONS...

ICU Utilization

ASKmeGOC group had **29.6% less** ↓ ICU days utilized compared to the control group (95% CI 8.2% to 46.1% fewer ICU days) (p=0.010)

Ventilator Utilization

ASKmeGOC group had **59.2% less** ↓ ventilator days utilized compared to the control group (95% CI 37.3% to 73.4% fewer ventilator days) (p<0.001)

DECREASE COST

Total direct patient care costs were

\$80,000 Less ↓

in the ASKmeGOC group, compared to controls*

*F23/24 (46.9% Sample)

Return on investment

For every \$1 of program costs, there was a

\$2 Decrease ↓

in direct patient care costs

PHYSICIAN FEEDBACK

"Ultimately it would be absolutely wonderful if a team was available to go and do the (goals of care) discussions."

"In general, people who are in hospital always feel better when they know more and understand more...Also, building understanding that it is not an all or nothing dichotomy is very reassuring too."

SCALE-UP AND SPREAD

The ASKmeGOC program was a recipient of the **Health Care Unburdened Grant (2024)**

The ASKmeGOC team will use this grant to support the scale-up and spread of the e-tool to other healthcare facilities.

Contact us to learn about the ASKmeGOC program & opportunities to become a study site.
